27 people managed, €25K budget.

INTERESTS

- Music & Art (self-taught guitarist and bassist)
- Skiing (10 years of club competition)
- Powerlifting (regional level)

PROFILE

Discovery and innovation-driven Product Manager with 3+ years at L'Oréal. End-to-end ownership of products with measurable impact: −50% air freight via a CO2 calculator, 2M€/year projected ROI on an AI optimisation tool. Drove lasting behavioral change across 200+ users — they changed their daily habits, data input practices, and now use analytics to manage business performance and year-end reviews. Passionate about products that transform behaviors; convinced that cybersecurity is the defining organisational challenge of our generation.

WORK EXPERIENCE

L'Oréal | Product Manager – Global Supply Chain Analytics
Jan. 2024 – Present

- End-to-end ownership of a suite of **10+ analytics products** for global Supply Chain — **200+ users**, **NPS 50+**; full autonomy over **product vision, strategy and roadmap**, continuously shaped by business priorities.
- **Continuous discovery**: 30+ user interviews cross-zone/function; **Figma** prototyping and AI POCs before building; hypotheses validated or discarded based on user feedback — including full dashboard redesigns after invalidating initial directions.
- **Business & sustainability impact**: CO2 Transport calculator → **−50% air freight** and alignment of **7 global zones** on shared calculation methods (DC performance, DC costs, CO2 transport); No Waste tool (ML forecasting + optimisation) → **2M€/year projected** (preserved revenue, FTE reduction, avoided destructions), ROI < 1 year.
- **Lasting behavioral change**: users changed how they input data, embedded analytics into year-end reviews to discuss performance bonuses and manage business daily — adoption tracked via NPS dashboard, training kits and webinars.
- **Innovation**: championed GenBI / **Talk with your Data** — hypothesis from user discovery: enable business users to answer their own questions without IT dependency; from user interview to working AI prototype.
- Aligned **5+ business owners**, **10+ developers**, C-level executives for steering committees and budget decisions in a global, matrixed organisation.

L'Oréal | Project Lead – WMS Transformation & DC Productivity
Sept. 2022 – Dec. 2023

- Led **SAP → Manhattan** WMS transformation: identified operational & strategic blind spots, defined the change programme — **100+ test cases** executed, productivity and compliance improved and measured.
- **Data & visibility**: **20+ BI reports** answering key questions on DC costs, productivity and compliance — insights previously unavailable to management.
- **Behavioral change**: full documentation, **~50h training** for operators & team leaders; sustained adoption of new ways of working post-deployment.

L'Oréal | Copacking Planner
Jan. 2022 – Jul. 2022

- Senior responsibilities (end of internship): planning, procurement & logistics for Garnier's promo catalogue — **99% service rate**.
- BI & **stakeholder management**: monitoring reports → **−20% stock gap** reduction with co-packer.

EDUCATION

Grenoble INP – Génie Industriel
2019 – 2022

Engineering Degree · Supply Chain, Data & Information Systems

- Grande École · Data Science, Operations Research, Project Management.

École Polytechnique de Montréal
2021 – 2022

Academic Exchange · Industrial Engineering & Computer Science

- ERP (SAP), Data Mining, Machine Learning.
